Call for participation

Linköping University and the Center for Medical Image Science and Visualization (CMIV) cordially invite you to the 2nd Nordic Symposium on Digital Pathology, November 5-6, 2014 in Linköping, Sweden. The symposium is a golden opportunity for health care and science to meet and discuss clinical experiences as well as state-of-the-art technology in the field. Given the prominent role of the Nordic countries in the evolution of digital pathology, we believe that the symposium will be very valuable for pathologists, image science researchers, clinical managers, and more.

Program

The symposium will have two keynote speakers with outstanding experience in the field:

- Andrew Evans, MD, PhD, BSc
  Director of Telepathology at University Health Network, Toronto, Canada
- Metin Gurcan, PhD
  Director of the Clinical Image Analysis Lab, Ohio State University, Columbus, USA

The program will include a number of invited talks where you will learn about leading efforts in digital pathology, spanning from forerunning clinical implementations to exciting research outlooks:

- Jan Baak, MD, PhD (Stavanger University Hospital)
- Sten Thorstenson, MD (Linköping University Hospital)
- Johan Lundin, MD, PhD (Institute for Molecular Medicine Finland)
- Torbjörn Andersson, MD, PhD (Örebro University)
- Derek Magee, PhD (Leeds University)

The symposium will also include a Science & Innovation session open for contributions. A core part is a poster session targeting recent or ongoing scientific and/or clinical efforts in digital pathology. Top contributions will also be published as papers in the Journal of Pathology Informatics. In addition, there will be a workshop session where all participants can share digitization project experiences.

A new component this year is an industrial exhibition, and there is ample time in the program to experience the latest commercial offerings in digital pathology.

Registration & submissions

According to instructions at the symposium website: www.liu.se/ndp
